W. L. Griffing

GRIFFING'S

1916

PRICE LIST

A GROVE OF PAPER SHELL PECANS

**HOME GROWN
TREES**

Announcement

December first, A. D., nineteen fifteen, W. C. Griffing purchased the nursery stock (trees and plants), nursery equipment and nursery property of Griffing Brothers, Inc., located at Grand Bay and Mobile, Alabama, and will conduct a general nursery business under the nursery name of Griffing's Grand Bay Nurseries.

No assets or liabilities of Griffing Brothers, Inc., were purchased or assumed other than contracts and orders for trees and plants to be shipped from their Alabama or Central Branch Nurseries, made or placed before December first, 1915, for which special arrangement is provided for filling and completing.

The Griffing's Grand Bay Nurseries offer and will grow one of the largest and most complete lines of fruit, nut, shade and ornamental trees, palms, shrubbery, rose bushes and plants adapted for planting along the Gulf Coast, offered in the South.

The business will be conducted along as broad and liberal a policy as is consistent with good business practice. Prompt and courteous treatment to all patrons, the supplying of the best trees and plants possible to grow at reasonable prices, being the foundation policy and principle on which I hope to build a permanent business and reputation second to none.

On this policy and principle I solicit your patronage.

GRIFFING'S GRAND BAY NURSERIES,
W. C. Griffing, Proprietor.

A Card

This card announces to the tree and plant buyers and to the public, that we have sold to W. C. Griffing, who has for the past nineteen years been Vice-President of our company and manager of our principal nurseries, the nursery stock, nursery equipment, and all property in Alabama.

We take pleasure in extending to Mr. Griffing our most hearty good will and bespeak the same from the many friends and patrons of our Grand Bay and Mobile, Alabama, nurseries.

Also, we have sold all our Florida interest to C. M. Griffing, and our Texas interest to W. D. Griffing, and Griffing Brothers, Inc., will not grow or offer nursery stock to the public after this date.

December 1, 1915.

Griffing Brothers, Inc.

Adaptability and Location

The trees and plants offered in these pages are grown in the loose, deep, sandy loam of the cut-over pine land of South Alabama, and are, therefore, eminently adapted to planting in Alabama, Mississippi and Louisiana.

Our nurseries are located 21 miles southwest of Mobile on the main line of the L. & N. Railway, and are within easy reach of all east and west and north and south lines of railway in this territory.

APR 24 1916

Suggestions About Ordering

And Terms of Sale

Read Carefully Before Ordering

BEFORE BUYING ELSEWHERE SEE OUR STOCK AND METHOD OF HANDLING TREES AND PLANTS. If you will advise us of your intentions to visit our nurseries and date you expect to arrive, will meet you on arrival of train at Grand Bay, Alabama.

NO AGENTS. We employ no agents and have no connection with any other nurseries, but many nurseries and dealers buy and sell our stock. Trees sold to dealers must be resold by them on their own responsibility. We are responsible only to parties purchasing direct from us.

IN WRITING THE ORDER. Patrons will oblige us, and avoid possible errors, omissions and misunderstandings by using order blank, and observing the following suggestions and terms of sale. More order blanks will be cheerfully furnished upon request.

CLUB ORDERS. Neighbors often club together and save both in cost of trees and express charges. If you would like to get up a club order, write for further information.

PRICES in this list are for goods packed and delivered to forwarders, purchaser assuming all cost and risk of transportation.

TERMS OF PAYMENT. Cash with order or before shipment of goods; or satisfactory reference.

OUR GUARANTEE. We remove from our nursery and destroy any and all trees that do not make a thrifty, healthy growth. We dig our trees with a whole-root system, selecting only the perfect trees for orders; we pack for shipment very carefully, using an abundance of the best available preservative.

If, for any reason whatsoever, the trees die after being planted by our customers, we will furnish additional trees of the same variety and size to cover the loss, at one-half the prices quoted herein. Orders for trees to replace a loss must be accompanied by a remittance of the half price. Shipment will be made by freight or express collect, as desired.

We exercise all possible care to have all stock well rooted, well grown, healthy, true to name, properly packed, and shipped according to instructions. It is, however, mutually agreed between the purchaser and ourselves that our liability under the foregoing is limited in amount to the original price received.

SUBSTITUTION. We desire to follow our customers' wishes in this respect, and have found that they usually wish us to substitute, to the best of our judgment, in case we are out of any varieties or sizes ordered. We therefore substitute when necessary, unless instructed to the contrary.

SELECTION OF VARIETIES suited to your locality is of first importance, and can often be more advantageously done by us than by purchaser. We will gladly aid our patrons in their selections and upon request furnish information as to adaptability and desirability of varieties.

MISTAKES. Did you ever make one? We do. The sin is not in making the mistake but in failing to correct it. If on unpacking you find any mistakes or indications of careless packing, you will confer a favor by returning packer's card attached to the trees, and reporting in detail any error or apparent carelessness on the part of the packer. The matter will have our immediate attention, and we will endeavor to adjust the complaint to your entire satisfaction.

Griffing's Grand Bay Nurseries.

Notes on Tree Planting

TREE SELECTION

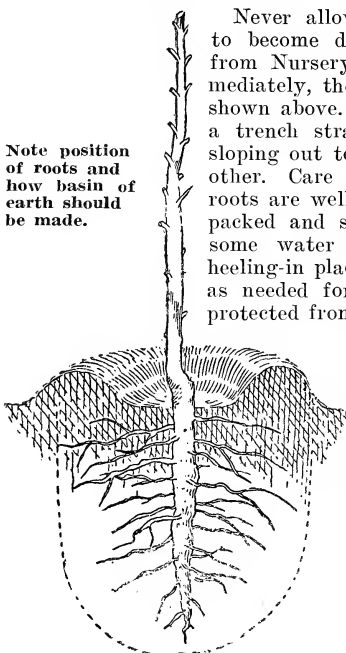

The trees with which you start are the foundation of your future. Be sure you plant the right varieties, grown right, and the future care, cultivation and attention, which is the real cost of all trees, will not be wasted.

Heeling in Trees.

CARE OF TREES ON ARRIVAL

Note position of roots and how basin of earth should be made.

Never allow the roots of the trees to become dry. On arrival of trees from Nursery, if unable to plant immediately, they should be heeled in as shown above. This is done by digging a trench straight down on one side, sloping out to the ground level on the other. Care should be taken that the roots are well covered, with earth well packed and settled around them; use some water and tread. From this heeling-in place they may be taken out as needed for planting, and carefully protected from the sun with damp burlap until planted in the field.

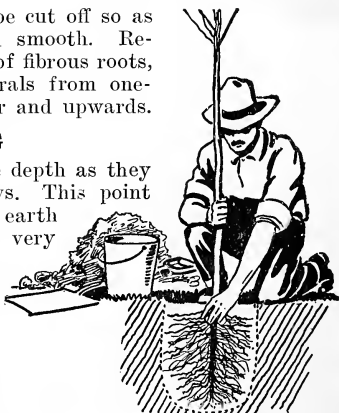

PRUNING

Some kinds of nursery trees must be pruned before shipping. Others are not pruned. It is a safe rule with practically all plants that the tops should be cut back before planting. We are willing to do this for our customers upon request. All broken and mutilated

portions of roots should be cut off so as to leave ends sound and smooth. Remove the greater portion of fibrous roots, leaving the main or laterals from one-sixteenth inch in diameter and upwards.

PLANTING

Plant trees at the same depth as they stood in the nursery rows. This point can be determined by the earth marks. Some trees are very much injured by too deep planting, and it is a safe rule with all trees and shrubs to set them a little higher than they grew rather than lower. Dig hole large and deep enough to admit roots without cramping. Spread

Don't be afraid of soil-ing hands or clothes

roots carefully by hand, and pack the earth well around them, using pulverized earth. When the hole is three-quarters filled up, pack thoroughly with the feet, then pour in from one to three buckets of water, according to the size of the tree, and the amount of earth to be moistened. As the water sinks down into the earth it settles the ground around the roots better than it can be done in any other way. So don't be afraid to use plenty of water. After the water settles, fill the hole up two or three inches above the level with loose moist soil.

GENERAL CARE

After carefully planting trees or shrubs, they should receive such care and attention as will keep them in thrifty growing condition.

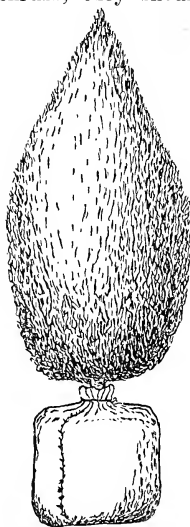

To bring about this condition they must be cultivated frequently, fertilized from time to time, and kept free from insects and diseases.

Keep the ground around trees and plants free from weeds, because they deprive the trees of needed moisture.

One of the most important objects of cultivation is conservation of moisture; this is accomplished by keeping a dust mulch around the trees. After a heavy rain, when the ground begins to dry you should break up the crust and keep the ground well pulverized.

FERTILIZE

To fertilize small trees the fertilizer should be spread in a band around the tree about one foot back from the trunk, as the trees grow older, spread the fertilizer in a wider band.

Balled and Burlaped Tree

PROPER DISTANCE FOR PLANTING

Satsumas	-----	15 to 20 feet apart each way.
Kumquats	-----	10 to 15 feet apart each way.
Pecans	-----	50 to 60 feet apart each way.

Paper Shell Pecans

A Sure, Safe and Substantial Income

for the young or middle-aged man or woman can be more quickly established in pecan growing than any other business in which he may engage. In pecan growing you are offered your greatest opportunity; if you are not firmly established, the pecan offers a safe, profitable investment for your surplus money.

The Kind of Pecans We Offer You

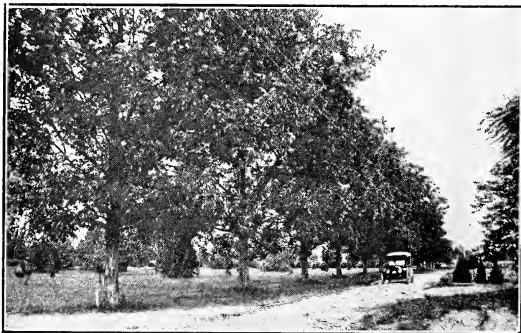

We have been closely identified with the development of the improved paper-shell pecan industry since its first inception, and have originated, introduced and disseminated several choice varieties. We are owners of some of the South's largest bearing and young pecan groves.

Gold Medal Was Awarded Griffing Brothers

at the Jamestown Tercentennial Exposition (1907) for the **sixteen best varieties of pecans**. This award of merit officially acknowledged us as the **then leaders of the world in pecan growing**. From these sixteen varieties were developed, improved and propagated, the peerless collection of pecan trees we offer today.

National Nut Growers Association Premiums

Griffing Brothers were awarded eight out of eleven possible first premiums for improved pecans at the last meeting of the National Nut Growers' Association, held at Houston, Texas, November, 1913. The National Nut Growers' Association is the highest tribunal on nuts in the world.

Pecans Along the Roadside

Pecans are Highest Rank and Highest Priced Nuts in the World

The improved paper-shell pecan nuts hold first place and command the highest price of all the world's nuts. Pecan nuts are in demand constantly at good prices for culinary purposes and for making of candies, etc. Nuts are gradually taking the place of meats in the staple daily diet of the world's people. In this the pecan will assume first place, because it is the **richest in nutriment of all the nuts**. Ask for bulletin number 16, "The Pecan and Its Uses."

The Limited Area of Successful Production

and the limited number of people who will engage in an industry where returns cannot be expected for six to eight years, together with the increasing consumption of nuts as a food product, will keep the supply far short of the demand and good prices will prevail continuously.

The Pecan is an Excellent Shade Tree

This, together with its valuable crop, commends it as the one most desirable tree to plant along your fence lines, roadsides, in and around your barnyard, hog lots and garden, in addition to solid plantings of orchards.

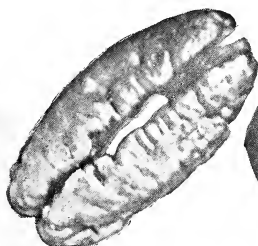

Trees should be planted at a distance of 45x60 feet apart, requiring about 18 trees per acre. At this distance other crops may be successfully and profitably cultivated between the rows of pecans without detriment or injury to the trees. The cultivation of other crops actually benefits the pecan trees and reduces the expense of upkeep to a minimum. We recommend the cultivation of corn, cotton and vegetable crops between the rows.

Five Recognized Best Varieties of Pecans

In summing up a lengthy talk before the National Nut Grower's Association at Houston, Texas, November, 1913, in which he described and discussed the relative merits of all existing, important, named varieties of pecans, (about 100), Prof. C. A. Reed of the U. S. Department of Agriculture, Washington, D. C., who is possibly the world's greatest living authority on nuts, pronounced Bradley, Curtis, Schley, President and Stuart, the "five really first-class nuts."

Prices of the Five Recognized Best Pecans and Other Standard Varieties

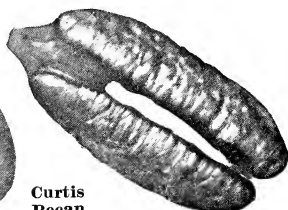

Approximate top growth.	By mail				
	each.	Each	10	100	1000
D—1½ to 2 ft., small	70c	65c	\$6.00	\$55.00	\$500.00
E— 2 to 3 ft., light	75c	70c	6.50	60.00	530.00
F— 3 to 4 ft., medium		85c	7.50	65.00	600.00
G— 4 to 5 ft., standard		\$1.00	9.00	80.00	750.00
H— 5 to 7 ft., large		1.25	11.50	110.00	
K— 7 to 9 ft., extra large.....		1.50	14.00	125.00	

**Bradley
Pecan**

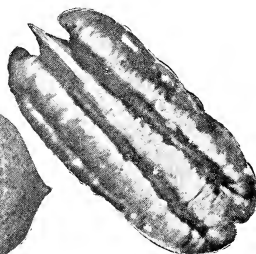

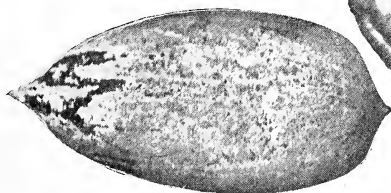

Bradley Pecan. A very productive variety; that has given exceptional results wherever planted; cracking quality good; kernel plump, rich and of very good quality. You can make no mistake if you plant Bradley.

**Curtis
Pecan**

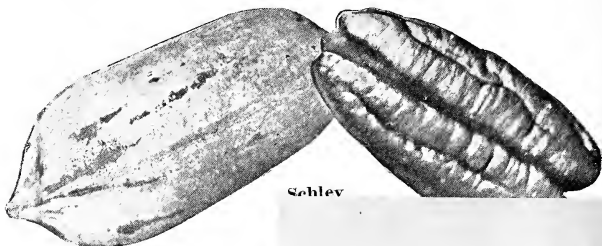

Curtis Pecan. Tree vigorous, open growth; bears at an early age; very prolific, shell thin, cracking quality exceptionally good. Kernel plump and richest in quality of any pecan generally planted.

President Pecan

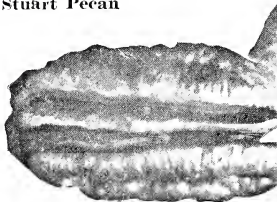

President Pecan. The parent tree began to bear six years after planting and the yield has increased until it now produces 100 to 150 pounds of nuts annually. This nut probably embraces more of the characteristics of a perfect nut than any other standard variety. Oblong, slightly compressed with a sharply pointed base; light yellowish-brown; size large; kernel long and plump; golden yellow; bright and attractive; texture fine; quality extremely good.

FIVE BEST VARIETIES—(Continued)

Schley Pecan. One of the best strong, symmetrical grower; superior in quality, richness,

Stuart Pecan

Stuart Pecan. Attractive, bearer; uniform size and shape; very good quality. A variety by which other nuts are judged.

Standard Varieties

Alley. Symmetrical, strong; cracking quality good, shells: flavored.

Delmas. Size large; an excellent cracks easily; quality good;

Daisy. Texas origin; a medium; shell moderately thin; flavor good.

Frotcher. One of the oldest in appearance; remarkable qualities.

Moneymaker. One of the best early varieties. It combines early maturity and heavy production. Nuts uniform in size.

Nelson. A very large and attractive nut; tree vigorous grower; bears in clusters; good flavor.

Pabst. Sturdy thrifty grower; highly productive; nuts very large; fair quality. Well adapted in coast sections.

Success. Size large to very large; shell moderately thin; kernel usually plump; quality rich; flavor very good.

Teche. Commences bearing very young; medium size; quality good; a profitable, practical variety.

Van Deman. One of the most attractive in appearance; very rich and well flavored. Medium large, elongated. A well-known and very desirable variety.

Bed Rock War-Time Prices**Standard Varieties of Pecan Trees.**

Approximate top growth	Each	10	100	1000
E—2 to 3 ft., light	65c	\$ 5.50	\$ 50.00	\$420.00
F—3 to 4 ft., medium	70c	6.50	60.00	500.00
G—4 to 5 ft., standard	80c	7.50	70.00	600.00
H—5 to 7 ft., large	\$1.00	9.50	90.00	800.00
K—7 to 9 ft., extra large	1.50	14.00	110.00	
M—9 to 12 ft., bearing	3.00	25.00	200.00	

We have a supply of the above varieties and where the selection of varieties is left to us we allow 10 per cent discount from these prices. By this we balance up our stock better and you can see from the descriptions you could not make a mistake.

J. W. ZINK & SON,
Orange Grove, Miss.

Owners of Parent Tree BIG Z
PAPER SHELL PECAN

SEE CATALOGUE PAGE

PROTECTED BY PATENT

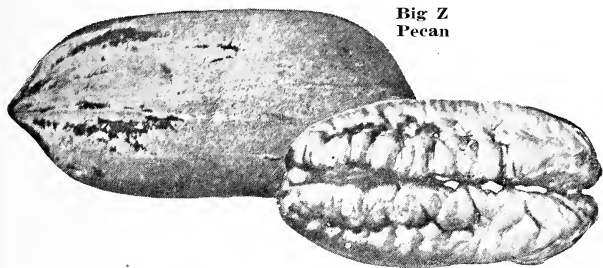

Special New Variety**Big Z Pecan**

The new **BIG Z** promises to be the peer of all varieties. The original tree was grown from seed, possibly of the Frotcher, on the property of Mr. J. W. Zink in Southern Mississippi. The tree is a strong, upright grower, and has large luxuriant foliage. Judging from the quantity, size and quality of the nuts produced on the original tree and on smaller trees which have been top-worked to Big Z, we believe that the Big Z will be one of the earliest-bearing and the largest of all the varieties. The Big Z has in the past borne one-third more nuts than any of the best old standard varieties, such as Delmas, Schley, etc., in the same grove.

Size very large, weighing 38 to 40 to the pound, nuts in clusters of three to five; shell thin; partitions thin, fine appearance; kernel rich, yellow, crisp and of fine flavor. Best cracking qualities of any large nut. We are the exclusive propagators of the Big Z and believe that we have never placed our name behind a more meritorious production.

Special Prices Big Z Pecan Trees

Approximate top growth	Each	10	100
E—2 to 3 ft., light	\$1.75	\$16.00	\$140.00
F—3 to 4 ft., medium	1.80	17.00	150.00
G—4 to 5 ft., standard	1.90	18.00	160.00
H—5 to 7 ft., large	2.00	19.00	170.00
K—7 to 9 ft., extra large	2.25	20.00	185.00

**Big Z
Pecan**

The **Big Z** pecan is an exceptional variety. It is very large, has thin shell, fills well and is a most wonderful bearer; the trees bear young and are rapid in growth. We believe that the Big Z is the best variety yet introduced. By our contract with the originator of this variety, we are compelled to charge a higher price than for trees of other varieties, as we pay a royalty on every tree sold.

What Experts Say About Big Z

These Letters Were Addressed to the Originator, Mr. J. W. Zink.

I gathered a crop from a six-year-old Big Z pecan tree this year of twelve and one-half pounds, for which I received 75c per pound. I find this variety bears at a very early age and with me it has proved a regular bearer, exceeding the Stuart and Success in this respect. It is a valuable variety for any commercial grove.

Pascagoula, Miss.

(Signed) FRANK H. LEWIS.

I want a grove of the Big Z pecans, the bright green foliage and large clusters which stand out so pronounced and the peculiar nutty flavor, also the way the big nut fills. I have always understood the large nuts did not fill.

Yours truly,

Ford, Miss.

(Signed) LEROY PERKINS.

We received Big Z pecans for which we are sending check to cover bill. They are certainly very fine, and excel any variety we have had the pleasure of eating.

Hillsboro, Ohio.

(Signed) MRS. CHAS. E. HAYNES.

Juglans

Japan Walnuts

The Japan walnut is a medium-sized nut of good quality and will positively grow and bear abundantly on any good land in the extreme South, as well as in the Central States. This cannot be truthfully said of any other walnut.

The fruit is borne in large clusters. Trees begin bearing the third or fourth year from planting, trees five to six years often bear a bushel or more of nuts. Every home or farm should have a few of these trees.

Prices of Japan Walnut Trees

Approximate top growth	Each	10	100
E—2 to 3 ft., medium	20c	\$1.70	\$15.00
F—3 to 4 ft., standard	25c	2.00	18.00

Varieties of Japan Walnuts

Cordiformis. Peculiar heart-shape; good quality; vigorous grower; productive.

Sieboldiana. Ovate, pointed; comparatively thin shell. Prolific and of good quality.

Southern-Grown Japanese Walnuts.

The Fig

A SOUTHERN FRUIT FOR OVER A HUNDRED YEARS

The Fig is so well known in the lower South that it would be unnecessary for us to discuss it at length; however, there are great numbers of people who do not appreciate the ease with which they may be grown, the absolute certainty and abundance of the crop and the simple home methods of canning, preserving and pickling the fruit. Fig trees are inexpensive and a small planting of only a few trees will produce an abundance of fruit for a family. A small orchard of 25 to 100 trees will bring an abundance of fruit for sale in the local markets.

A commercial orchard of Figs combined with a home canning outfit will bring a revenue of \$100.00 to \$200.00 per acre. Write for full information on commercial fig culture.

Varieties of Figs

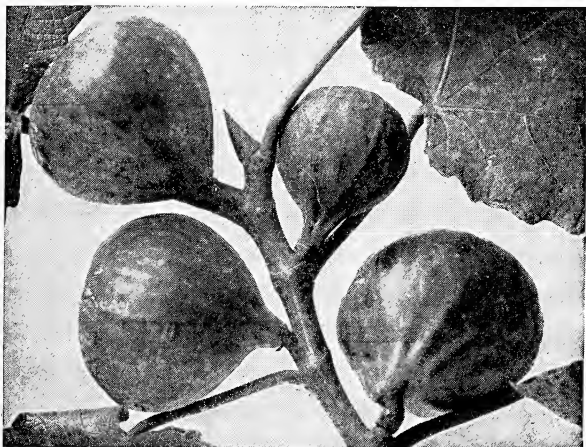

Brown Turkey. Medium to large; color, yellowish brown, tinged with pink. An early heavy bearer. Splendid variety for home or market.

Brunswick.—Very large, purple. Fruit ripens over a long period. Of splendid quality.

Celestial. Very hardy, upright growing tree. Fruit small to medium size. Color, blue or brown; quite sweet. Commonly called the "little blue sugar fig."

Green Ischia.—Large, pale green, pulp crimson; rich and tender; late.

Magnolia. The variety so largely planted in Texas and Southwest Louisiana for shipping and canning. Makes a very fine preserve. Bears the first season.

Celestial Fig.

MAMMOTH JAPANESE

Persimmons

**A MOST DELICIOUS FRUIT FOR HOME AND MARKET
THAT MAY BE ENJOYED FROM SEPTEMBER
UNTIL CHRISTMAS**

A high-priced fruit on every market where known. Shipments have been successfully made to England. A fruit even more productive than apples or peaches, that is more delicious and sells for better prices. Because their name is Persimmon do not confuse them with the little puckery wild persimmon you may know. Our large descriptive catalog illustrates them in natural color and tells you of their value. Ten or a dozen trees if not an orchard should be planted by every home owner or farmer.

The United States government has conducted a series of experiments in processing persimmons to remove the astringent or "puckery" taste that they may be marketed in the fresh state similar to peaches and apples. For complete details of this process see U. S. Dept. of Agriculture, Bulletin No. 441, prepared by H. C. Gore, Division of Foods, Bureau of Chemistry, Washington, D. C.

The persimmon is positively one of the surest and most prolific fruit crops along the coast and in the cotton belt. Plant some of the following varieties and you will not be disappointed:

Standard Varieties Japanese Persimmons

Costata. Medium size, conical; salmon yellow. Vigorous, prolific.

Dia Dia Maru. Medium size, tomato shape; flesh white, fine quality.

Hacheya. Exceptionally large, roundish-oblong. Reddish-yellow. Vigorous.

Hyakume. Very large, bluish-yellow. Vigorous, thrifty; good quality.

Okame. Large, oblate, dark red. Yellow flesh, few seeds.

Triumph. Medium size, tomato shape. Very prolific; splendid quality.

Tane Nashi: Well known, seedless, very popular. Large, conical, pointed. Red.

Tsuru. Long, pointed, bright red. Prolific, few seeds. Late.

Yeddo Ichl. Smooth, regular, nearly round. Very dark red. Non-astringent.

Yemon. Flat, tomato-shape. Bright orange-yellow. Seedless, good quality.

Zengi. Quite small, very regular, heavy bearer. August to Christmas.

New Chinese Tamopan Persimmon

A new Chinese variety introduced by the Department of Agriculture a few years ago, and has been fruiting for the past three years in Hernando County, Florida, and in Gulf Coast sections of Mississippi. Fruit very large, somewhat flattened with compressed ring around fruit. Color beautiful golden red, skin quite thick and tough; flesh light-colored and astringent until quite ripe. Tree exceedingly vigorous with very glossy leaves. Produces when very young, and very productive.

Plums

Excelsior Plum

The plum is one of our best home fruits. There are few families who are not fond of plums, either fresh, canned or preserved. The South can grow plums of as fine quality and in as great abundance as California, Colorado, or any of the states that are shipping them to us at a big profit.

PLUMS—(Continued)

The plum seems to be particularly at home when planted in the poultry yard. The high percentage of nitrogen in the soil is especially favorable.

Abundance. Very large, prolific. Yellow; ripe in June.

Burbank. Large, clear rich red. Flesh yellow and firm.

Excelsior. Remarkably strong grower; fruit medium to large size; reddish purple; flesh firm and yellow. An excellent plum. May.

Gonzales. Very large, red, good quality.

Happiness. Large, glowing red; firm, rich and juicy. June.

Kelsey. Unusually large, greenish yellow. Flesh fine, solid, rich and juicy.

McCartney. Very early, oblong, rich transparent yellow; strong grower and very productive. The largest and most reliable yellow plum.

Prunus Pissardi. Purple leaved plum. Valuable as an ornamental.

Red June. Vigorous grower, prolific, medium to large. June.

Stumpe or Howe. Heavy bearer, medium large, dark red. May.

Terrell. Large, nearly round, reddish yellow. Assumes a wine red when ripe. June.

Wickson. Large, deep maroon red. Flesh yellow. Small pit. July.

Florida. A new plum of Japanese strain and of exceptional qualities for the South. Very large, abundant bearer, strong vase-shaped grower. Reddish yellow, overspread with purple tint. No plum has ever been more promising for general Southern planting. June.

Hoyt. A most vigorous tree, cross of Japanese and American type. Has given wonderful results wherever tested. Bears in long clusters. A wonderful producer. Medium to large; purplish red. Meat dark yellow, pit small, separating easily. A most valuable plum.

Apples

Day. Medium to large size, red striped on one side. This apple is well adapted to the extreme South. This variety received third prize and a bronze medal at the World's Fair, St. Louis, 1904, in competition with 2,800 varieties from all parts of the world.

Mason. Medium size, yellow, striped red. The original tree has borne thirteen successive crops in South Texas without failure.

Blackberries

There is no section of the world where berries are more thrifty, healthy and productive than in the lower South. A few plants of the following improved types will produce an abundance of fruit.

Dallas Blackberry
MacDonald Blackberry
Snyder Blackberry

Austin Dewberry
Hauptberry

Prices of Strong Transplanted Two-year-old Plants.

10c each.

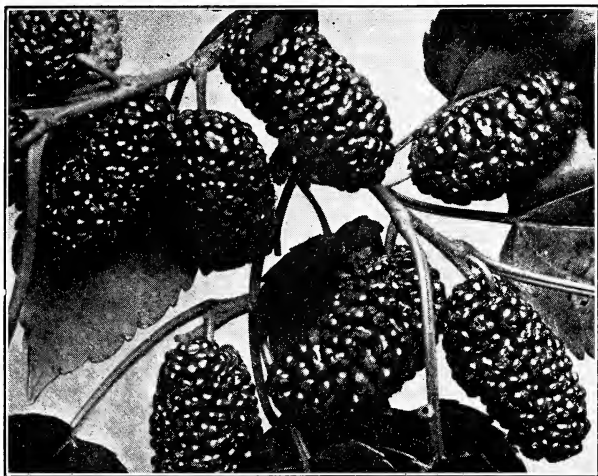

80c per 10.

\$7.50 per 100.

Morus

Mulberries

The Mulberry combines actual value and utility with a splendid ornamental appearance. A few trees planted in the chicken yard will furnish food for a large flock for a period of two to three months in the spring and summer. In the hog lot they combine a splendid summer shade with a valuable fattening mast. The trees are very cheap, grow easily, quickly and soon make a nice shade.

Merritt Mulberry

White Mulberry. Medium size, light creamy yellow. Prolific.

Silkworm Mulberry. Vigorous grower; makes good shade.

Downing. Strong grower; dense foliage; delicious fruit.

Hicks' Everbearing. Heavy bearer, fruits over a long period. A few trees will produce an abundance of fruit for a large flock of chickens or hogs.

Merritt. The earliest variety; berries very large and full; ripe in April and May. Every planting should contain Merritt.

Pomegranates

An old historical fruit. Thrives throughout the South, making a large shrub or small tree. Fruit is liked by many; foreigners from warm climates are especially fond of it. Meets with ready sale on market.

	Each	10
C—1 to 2 ft., small size	\$.30	\$2.70
E—2 to 3 ft., medium size	.40	3.50
F—3 to 4 ft., standard size	.50	4.50

Sweet. A favorite with everyone.

Sour. Strong acid; ruby colored pulp; flowering, white and red.

Grapes

There is a space on the grounds of every home for a few grape vines; and there is a variety of grape that will grow well and fruit in abundance where any other fruit or vegetables grow successfully. The list given below includes the right variety for you to plant. We especially recommend the Southern Muscadine type for trellises and to train on walls, fences and out-buildings.

The Southern farm is incomplete without at least a small vineyard. Delicious wines and grapejuice can be made at very little cost.

Bunch or Trellis Grapes

This type should be planted about ten feet apart in eight-foot rows.

Agawam	Clinton	Elvira	Ives	Niagara
Champion	Concord	Delaware	Moore's Early	Salem

Scuppernong Grapes

Southern Muscadine Grapes

The Muscadine, or Scuppernong, is native to the South and is well adapted. You can plant them with assurance of success where other varieties have failed. This type should be planted twenty to twenty-five feet apart and trained on a flat arbor 10 to 15 feet wide.

Eden. Large black, delicate flavor, large cluster, early bearer.

Flowers. Large cluster, good quality, very late.

James. Very large, purplish-black. Rich, sweet, juicy and attractive. Very rank healthy grower and a wonderful annual bearer.

Meisch. New variety, medium size; earliest of the type.

Scuppernong. Large bronze-colored berry. Flesh sweet, pulpy and vinous. The most popular grape on the Southern market.

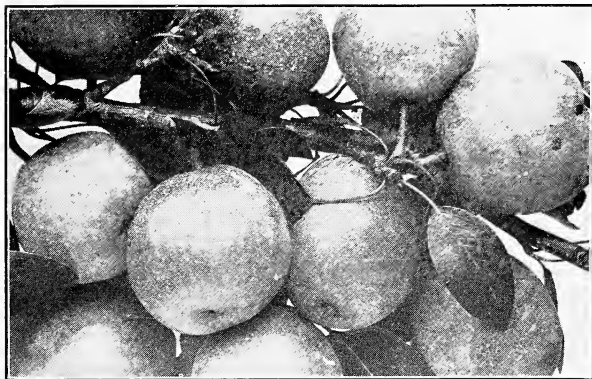

Thomas. Small cluster, medium size; very fine quality, makes a wine with a most pleasant musk flavor; earliest to ripen.

Pears

Pears are a staple, reliable crop. The blight-resisting varieties may be depended on for heavy, regular crops. Pears always bring a fair price in the market, and quite often they bring very high prices.

Fruiting Branch Dixie Pear

The New Dixie Pear

Dixie. A new variety originated in Southern Georgia, of marked vitality and wonderfully prolific. Positively resists blight; is of excellent quality and large size.

Standard Varieties of Pears

Blight-Resisting Varieties

Citrus Fruits

We are offering only Kumquats and Satsumas. Oranges budded on the Citrus Trifoliata Roots.

Kumquats

You will only appreciate the value of the kumquat when you have had the privilege of enjoying a liberal portion of kumquat preserves, kumquat jam, kumquat marmalade, or kumquat jelly, served with hot biscuit. A food fit for the gods, each is only approached in quality by the other.

The Kumquat tree is very hardy, is a good grower and bears some fruit the first season after setting. The trees are enormous bearers and never miss a crop. Has good market value. Largely used at Thanksgiving and Holiday season for table decorations.

Varieties of Kumquats—Marumi, Nagami, Neiwa.

Prices of Kumquat Trees

The Satsuma Orange

The Satsuma is an excellent orange, both for home and commercial use and may well be classed as among the safest and most productive fruits for general planting in the coastal sections of Texas, Louisiana, Mississippi and Alabama.

This orange is the hardiest known variety of edible citrus fruit. It will, when budded on hardy Citrus Trifoliata roots, stand a temperature of 10 to 15 degrees below freezing without suffering a material injury or missing a crop.

Satsuma Orange Grove, Budded on Citrus Trifoliata Roots

The Satsuma cannot be successfully grown in Central and South Florida or in California, leaving only a limited area along the Gulf Coast to produce this, the most valuable of all oranges.

Trees should be planted fifteen to twenty feet apart. At 15 feet it requires 196 trees per acre; at 20 feet apart 108 trees per acre. Satsumas, when planted between Pecans give quick returns and permanency to the planting. Ask for Planting Plans for best arrangement of trees.

Only Limited Area Can Produce Good Satsumas. South Florida and California cannot, leaving only a limited area adapted to their successful and profitable culture.

The Satsuma is in fact the great commercial orange for the sections of Alabama and Mississippi, bordering on or within one hundred miles of the Gulf of Mexico.

An Acre of Five-Year-Old Combination Satsuma Orange and Pecan Grove is Worth One Thousand Dollars

The returns from the fruit producing a revenue equal to the interest on a much greater amount; the fruit off some groves selling for from \$700.00 to \$1,000.00 per acre per year.

Opuntia ficus indica

Spineless Cactus

A unique and very attractive ornamental plant with considerable economic value as a stock food. If supplied with potash and alkaline fertilizer will produce wonderfully large crops on the poorest of land. Thrives in dry arid locations. Price of slabs or large leaf cuttings—25c each; \$2.00 per 10; \$10.00 per 100.

Evergreen Shade Trees

It will surprise you to know how pretty and attractive you can make your home by spending a few dollars for trees and shrubs. They are cheap and anyone can grow them. Too many people have "houses"—few have "homes," for it takes shrubs and trees properly arranged to make an attractive "home."

By planting a few dollars worth of trees many people make their homes so attractive that the valuation is increased 25 to 35 per cent. The investment of a few dollars worth of our trees and shrubs will pay 1000 per cent on the investment. Why put it off?

Inviting, Attractive Homes Hold the Boys and Girls

All trees in this list have their beautiful green leaves the year around. Some have beautiful flowers, some attractive fruit. Planted on your grounds they make a beautiful green setting for your home, and you will always be proud to say to your friends, "this is my home," if your yard is planted with any or all of these.

ASH EVERGREEN. Rapid growing, drouth-resisting, always has glossy green appearance. Should be planted everywhere in the South.

Camellia Japonica. A favorite, old Southern flower, the demand for which is continually increasing. These plants are mostly imported; while we secure our young stock plants from most reliable sources, we can not always guarantee that plants will come true to color. We have to purchase and sell them under these conditions. We offer a good collection in singles and doubles; every plant is good and will please you. B—\$1, C—\$1.50, D—\$2.

Coniferous Evergreen Tree

Dwarf Golden Arborvitae

foliage. Splendid for lawn planting.

Rosedale. A very handsome variety. Foliage dark green and plume-like, but very compact. This is a most attractive border for lawns, roadways and walks and is unexcelled for massing.

Arborvitae and Cedars are very easy to grow and are among the most beautiful of ornamental trees and plants. One of their very desirable features is the fact that they make a splendid appearance as soon as they are set.

Arborvitae

Dwarf Golden (B. aurea nana). Fine plant of dwarf habit; attains height of 6 to 8 feet. Compact and bushy; rich golden tipped foliage. Always beautiful, from the little plant until it attains full size.

Globe (B. Globosa). Round, globe-shaped head, full, compact growth. Dark green

If Balled They Won't Know they Have Been Moved

Deciduous Shade Trees

Although these trees lose their leaves and are bare for a short time every year, they are none the less beautiful. The most beautiful flowering trees are deciduous, and when you want beautiful blooms in the spring, with attractive foliage all summer and fall, make your selection from this list.

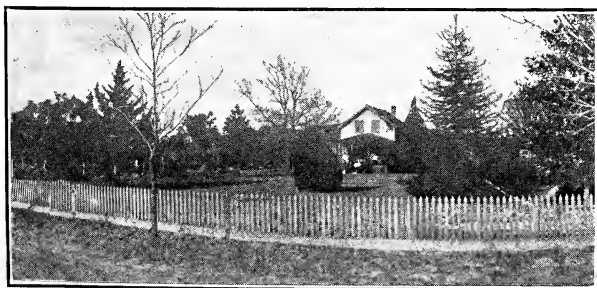

Pecan Among the Handsomest of Deciduous Shade Trees

- Ash Green.** Quick growing, sturdy and hardy.
Box Elder. Attractive bloomer; good for home grounds.
Cottonwood. Rapid grower, good foliage. Grows anywhere.
Japanese Varnish. Beautiful flowers in spring. Good for lawn.
Locust, Black. Thrifty growth. Shade tree for home grounds.
Poplar, Carolina. Rapid grower, good for shade
Poplar, Lombardy. Tall, symmetrical, shaft-like tree. Rapid growth.
Soap Tree. Small tree, good for lawn.
Sycamore. Choice avenue and shade tree, vigorous.
Sweet-Gum. Good for ornamental shade. Wonderful color in autumn.
Salt Cedar. Low growing, good for lawn effect.
Texas Umbrella. Resembles an immense umbrella, sub-variety of Umbrella China. Wonderful dense shade for summer.
- All trees listed are perfectly hardy in the South.

The House is Modest, the Trees Make it an Attractive Home

Deciduous and Herbaceous Flowering Shrubs

Althea. Rose of Sharon. Upright growing, profuse flowering shrubs, of many colors.

Boule de Feu. Double light red. Blooms late.

Duchess de Brabant. Double red, profuse bloomer.

Totus Alba. Single, pure white, very profuse.

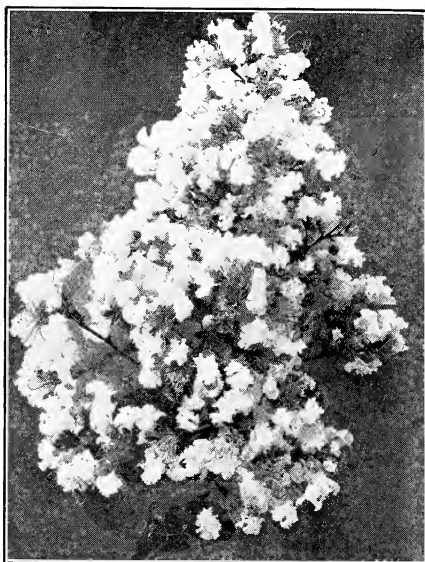

Assorted Colors. Best varieties mixed, including single and double red, white, pink, and purple.

Crape Myrtle. The well known hardy deciduous tree; very free flowering. Will grow anywhere. Colors: crimson, pink, purple and white.

Deutzia. Very ornamental, slender, profuse flowering shrubs.

D. Gracilis. Very graceful; pure white flowers.

D. Pride of Rochester. Double white, back of petals pink.

Crape Myrtle Blossom.

Japan Bush Clover. A very fine variety of the sweet clover family. Rank grower and profuse bloomer. Pink and white.

Pomegranates—Flowering. Nice shrub or small tree with an abundance of flowers in summer. Double white and double red.

Pomegranates—Dwarf Double Red. Profuse bloomer in spring, followed by an abundance of red fruits. Very dwarf growth.

Red Osier. A strong growing shrub, white flowers, height 10 to 12 feet.

Spiraea. A very graceful and highly attractive shrub. Many varieties.

S. Billardi. Attains 6 feet very graceful; pink flowers in panicles.

S. Douglassi. Attains about 8 feet. Deep pink flowers in spikes.

S. Van Houtte. A very beautiful, early, white flowering variety.

Weigela. Small shrub of spreading habit and very showy flowers.

Bamboo and Ornamental Grass

These plants are very desirable in some locations for screens, hedges, windbreaks, masses, etc. They are quite rapid in growth.

The varieties of Bamboo and Ornamental Grasses we offer are hardy throughout the South. They are desirable for borders, windbreaks as well as for individual planting, lending a warm tropical effect to the grounds or yard.

Bamboo Argentea.
Thrifty. Attains 40 feet in height.

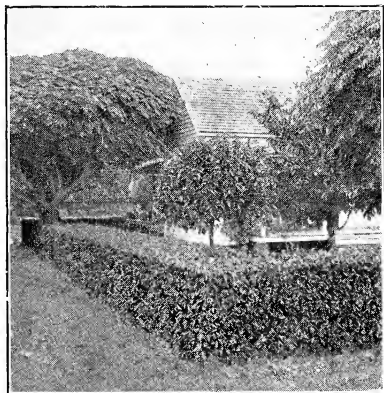

Bamboo Falcata.
Height 6 to 10 feet; fine leaves; very desirable.

B. Arundinaria Metake. Large leaves—grows 6 to 10 feet.

B. Verticillata.
Good variety for windbreak; height 20 to 30 feet.

Pampas Grass.
The grandest of all plume grasses. Long plumes; attains 12 to 15 feet.

Lemon Grass. Variegated ornamental grass, Medium growth.

Camphor Hedge

Vines planted at a base of a porch completely change the appearance of the house. Many houses are covered with vines the year around and are noted for their beauty. Make your house look different from your neighbors' by planting vines.

Honeysuckles. Evergreen vine with yellow and white flowers. Varieties Golden Netted; Hall's Japanese.

Boston Ivy. Evergreen and compact.

English. Evergreen, clings close to surface of house.

Virginia Creeper. Attractive evergreen climber.

Kudzu. A rank climbing leguminous vine.

Jasmines. Most famous scented vines of the South.

Carolina Yellow. Graceful, rapid growing; yellow flowers in spring.

Star Jasmine. Rapid grower; white flowers in spring.

Japan Paper Flower (Bougainvillea). A desirable climber with brilliant pinkish purple bracts presenting a most gorgeous display of color almost constantly.

Mountain or Mexican Rose. Rapid growing vine producing pink flowers summer and fall.

Wistaria. Deciduous rapid grower, purple blossoms in spring and summer.

Roses

Anyone can grow roses. Some fail because they do not start with plants budded or grafted on non-sprouting stocks or roots. We fill all orders with strong field grown bushes such as will give satisfaction in your rose garden. Our rose bushes should not be compared with tender indoor pot-grown plants or bushes grown from slips. Most varieties are subject to root-knot and will not give good results unless grafted or budded on immune stocks. In many cases we can make a better selection of varieties for any particular location. If left to us we will make careful selection.
